

Advice

- It is vital to print this drilling jig in its original size! Please pay attention that automatic page adjustment in your printer set up has been switched off. (Print with 100%).
- If available use DIN A4 paper with a paper weight of minimum 120g/m². This facilitates the drilling job.
- You can use one drilling jig several times, but if the hole is damaged we recommend a new one!

Drilling jig for vertical alignment

Drilling jig for horizontal alignment

Hanging or fixing Cubit®s – Easy with our universal drilling jig!

Thanks to the patented connector and clamp system you can also let individual Cubit®s float on the wall and they can thus be used as a hanging shelf. The clamp made from galvanized steel also fits into the circular groove and enables stable wall suspension.

To do this, place your Cubit® wherever wanted and mark the edges with a sharp (!) pencil. Please use the added drilling jig for marking the drill holes, right after you may drill the holes. Maybe one hole is sufficient, but this clearly depends on the condition of your walls. Afterwards you can fix the clamps and hang your Cubit®.

The advantage of this new drilling jig is its higher flexibility. Due to its size the new drilling jig allows easier positioning of single clamps to mount your Cubit® to the wall. We always recommend wall mounting with a shelf-height as of 1.40m. In case there are children living in your household, we always recommend wall mounting in order to stabilise the shelf. If you are not sure where to fix your shelf check the assembly instructions, please.

Mark bottom or side edges with a sharp pencil.

Mark drill holes using the jig.

Drill holes.

Fix clamps.

Hang Cubit® module. Finished!
